

EE 416 Computer Engineering Senior Design
Fall 2026
Project Team Contract

Team Name: Underwater Lidar Turbidity System Group

Members: (printed)

- 1. Dylan Tappendorf**
- 2. Alexander Strattard**
- 3. Alexander Paquette**

We, the above named members of this team, have freely expressed our views and have agreed to the following terms which we will follow while working on this project.

1. We agree to meet regularly at least once per week, outside of scheduled lab and class time as follows: **Townhouse A25 on Mondays and Wednesdays from 4pm to 6pm.**

2. We agree to contact one another using the telephone and e-mail addresses given below:

(1) Alexander Paquette: paquetaj@clarkson.edu (802)-393-0787

(2) Alexander Strattard: strattaj@clarkson.edu (207)-240-9680

(3) Dylan Tappendorf: tappendc@clarkson.edu (351)-444-2063

3. We agree that the following person has been elected as team leader. **Dylan Tappendorf**

He or she will review weekly progress reports and may comment on them. If the progress reports reveal the need for an extra team meeting, he or she will call the team together. Each member of the team is obligated to attend any such meetings. All meetings should be called at a mutually agreeable time. The team leader will assume responsibility of ensuring that all documents needed for each milestone are together and ready by the due date. It is the responsibility of each team member to contribute his or her portion of the materials needed for each milestone.

4. An important aspect of group cooperation is the process for making decisions. Each team must agree on a method for making decisions. You may select one of the following methods, or you may describe another method of your own choice.

(a) Team Leader

Your team leader will consider input from each team member and make the final decision if the team does not agree on a single choice.

(b) Majority Vote

Your team may decide issues by majority vote. In the case of votes with no simple majority, you should reject the choice with the fewest votes, and then vote again on the remaining choices.

(c) Consensus

You may reach decisions by consensus (everyone agrees). Be aware, this process can be lengthy and works only if each member is willing to make compromises in what he or she believes is best.

The group will come to a consensus on decisions involving the project before enacting any necessary changes.

5. We agree to the following process to ensure that each milestone is completed in a timely and satisfactory manner:

The group will get a head start on each milestone and stay for the entire duration of the lab session on Tuesdays and Thursdays to ensure that criteria are met before the deadline.

6. We agree to be fair and honest when conducting team peer evaluations. We agree to work in the best interests of the team as a whole. If anyone of us encounters difficulties in completing our assigned tasks, we will notify our team and seek help first from them, then from the instructors. We agree to abide by our Team Code of Ethics (attach your Team Code of Ethics to this document).
